

DISTRIBUTION ARCHITECTURE

In order to meet the requirements of our customers, CloverLeaf offers multiple distribution architecture choices.

For those service providers preferring the security and increased reliability of a locally-hosted solution, CloverLeaf provides and manages servers that fully host our applications and databases – set-top box requests remain on the local network, and remote connectivity is limited to server updates and management, and for communication with social networking application websites.

For those preferring the elegance of a cloud-hosted solution, CloverLeaf provides a robust hosting environment on multiple tier 1 backbones, as well as a fully-independent online back-up POP for disaster recovery.
